EDUCATION

Munich Business School

MBA, General Management
2025 – 2026

Focus: Strategy, Finance, Marketing,
Supply Chain Management,
Accounting, Project Management

Pune University, India

Bachelor's, Mechanical Engineering
2016 – 2021

CORE COMPETENCIES

- IT Project Coordination
- Agile & Scrum Delivery
- Stakeholder & Partner Management
- Risk, Issue & Dependency Management
- Release, Cutover & Migration Management
- Requirements Gathering & User Stories
- Milestone Tracking & Status Reporting
- Business-Technology Alignment

TECHNICAL & TOOLS

- Jira & Confluence
- Agile, Scrum & SAFe
- Microsoft 365
- AI-Assisted Code Review
- Java, Spring Boot & REST APIs
- Angular
- System Integration & Authentication
- Load & Performance Testing

LANGUAGES

English

German — A2 (improving)

ADITYA WANMALI

IT PROJECT MANAGEMENT | AGILE DELIVERY | STAKEHOLDER MANAGEMENT

PROFILE

MBA graduate with 3.5 years of experience at Capgemini, working on technical projects for Mercedes-Benz R&D. Managed the day-to-day delivery of more than 30 system cutovers and migrations, from planning and readiness checks to risk tracking and stakeholder updates. Worked closely with business, engineering, security and external partner teams to resolve blockers and keep the work moving. A hands-on background in Java, Spring Boot, Angular and REST APIs makes it easier to understand technical issues and discuss them clearly with both developers and business stakeholders.

WORK EXPERIENCE

Capgemini | Bangalore, India

01/2022 - 06/2025

Associate Consultant | Project Management & Technical Delivery

Client: Mercedes-Benz Research & Development India

Global Dealer-Order Data Migration

- Led the project as the sole delivery lead, coordinating the Mercedes-Benz AG team in Germany with regional teams worldwide across multiple time zones. The system transferred dealer order data to the appropriate manufacturing or operations plant in each region.
- Completed more than 30 system cutovers and migrations, coordinating readiness checks, deployment teams, smoke testing and post-release follow-up.
- Identified integration blockers early and worked with engineering, security and regional teams to manage technical dependencies, firewall clearances and delivery risks.
- Turned stakeholder requirements into user stories, Jira tickets and technical specifications. Managed backlog refinement, sprint planning and reviews while tracking milestones, risks, blockers and action items in Jira and Confluence.

Technical Development

- Developed responsive Angular interfaces and secure Java/Spring Boot services for authentication and high-volume data transfers.
- Built and tuned REST APIs handling more than 10,000 transactions per day, reducing average response time by approximately 30%.
- Designed and built a reusable load-testing framework that was adopted across the project to identify performance bottlenecks before production.
- Developed an AI-assisted pull-request review tool that checked for coding-style issues, common errors and potential risk areas before human review.

CERTIFICATION

- Google Project Management Professional Certificate - 2026
